FOREWORD

This is a list of important commercial crop varieties whose seeds and seedlings are available for international exchange. It was first published in 1965 to promote international cooperation in agricultural improvement through the exchange of planting materials between the Republic of China and other countries of the world.

In the last seven years, a series of new crop varieties has been systematically bred, tested, and established in Taiwan. These new varieties and many native ones all have good genetical traits and thus can be used as dependable material for breeding programs.

This pamphlet is prepared by Messrs. C. I. Lin and C. C. Chen, Seed Technology Specialists of this Division, in cooperation with agricultural experts of the Taiwan Provincial Department of Agriculture and Forestry. It is hoped that this revised edition will prove to be even more useful and help to stimulate still further the free exchange of crop seeds and seedlings with interested parties, thus indirectly accelerating agricultural production and satisfying the demands of consumers for high quality farm products.
